7.4 Showing Triangles are Similar: SSS and SAS

Goal

Show that two triangles are similar using the SSS and SAS Similarity Theorems.

Key Words

• **similar polygons** p. 365

The triangles in the Navajo rug look similar. To show that they are similar, you can use the definition of similar polygons or the AA Similarity Postulate.
In this lesson, you will learn two new methods to show that two triangles are similar.

THEOREM 7.2

Side-Side-Side Similarity Theorem (SSS)
Words If the corresponding sides of two triangles are proportional, then the triangles are similar.

Symbols If $\dfrac{FG}{AB} = \dfrac{GH}{BC} = \dfrac{HF}{CA}$, then $\triangle ABC \sim \triangle FGH$.

EXAMPLE 1 Use the SSS Similarity Theorem

Determine whether the triangles are similar. If they are similar, write a similarity statement and find the scale factor of Triangle B to Triangle A.

Solution

Find the ratios of the corresponding sides.

$$\frac{SU}{PR} = \frac{6}{12} = \frac{6 \div 6}{12 \div 6} = \frac{1}{2}$$

$$\frac{UT}{RQ} = \frac{5}{10} = \frac{5 \div 5}{10 \div 5} = \frac{1}{2}$$

$$\frac{TS}{QP} = \frac{4}{8} = \frac{4 \div 4}{8 \div 4} = \frac{1}{2}$$

All three ratios are equal. So, the corresponding sides of the triangles are proportional.

ANSWER ▶ By the SSS Similarity Theorem, $\triangle PQR \sim \triangle STU$.

The scale factor of Triangle B to Triangle A is $\dfrac{1}{2}$.

EXAMPLE 2 Use the SSS Similarity Theorem

Is either △DEF or △GHJ similar to △ABC?

Student Help

STUDY TIP
When using the SSS Similarity Theorem, compare the shortest sides, the longest sides, and then the remaining sides. ·············▶

Solution

❶ Look at the ratios of corresponding sides in △ABC and △DEF.

Shortest sides	**Longest sides**	**Remaining sides**
$\dfrac{DE}{AB} = \dfrac{4}{6} = \dfrac{2}{3}$	$\dfrac{FD}{CA} = \dfrac{8}{12} = \dfrac{2}{3}$	$\dfrac{EF}{BC} = \dfrac{6}{9} = \dfrac{2}{3}$

ANSWER ▶ Because all of the ratios are equal, △ABC ~ △DEF.

❷ Look at the ratios of corresponding sides in △ABC and △GHJ.

Shortest sides	**Longest sides**	**Remaining sides**
$\dfrac{GH}{AB} = \dfrac{6}{6} = \dfrac{1}{1}$	$\dfrac{JG}{CA} = \dfrac{14}{12} = \dfrac{7}{6}$	$\dfrac{HJ}{BC} = \dfrac{10}{9}$

ANSWER ▶ Because the ratios are not equal, △ABC and △GHJ are not similar.

Checkpoint ✓ **Use the SSS Similarity Theorem**

**Determine whether the triangles are similar. If they are similar, write a similarity statement.**

THEOREM 7.3

#### Side-Angle-Side Similarity Theorem (SAS)

Words If an angle of one triangle is congruent to an angle of a second triangle and the lengths of the sides that include these angles are proportional, then the triangles are similar.

Symbols If ∠X ≅ ∠M and $\dfrac{PM}{ZX} = \dfrac{MN}{XY}$, then △XYZ ~ △MNP.

EXAMPLE 3 Use the SAS Similarity Theorem

Determine whether the triangles are similar. If they are similar, write a similarity statement.

Solution

$\angle C$ and $\angle F$ both measure $61°$, so $\angle C \cong \angle F$.

Compare the ratios of the side lengths that include $\angle C$ and $\angle F$.

Shorter sides $\dfrac{DF}{AC} = \dfrac{5}{3}$ **Longer sides** $\dfrac{FE}{CB} = \dfrac{10}{6} = \dfrac{5}{3}$

The lengths of the sides that include $\angle C$ and $\angle F$ are proportional.

ANSWER ▶ By the SAS Similarity Theorem, $\triangle ABC \sim \triangle DEF$.

EXAMPLE 4 Similarity in Overlapping Triangles

Show that $\triangle VYZ \sim \triangle VWX$.

Solution

Separate the triangles, $\triangle VYZ$ and $\triangle VWX$, and label the side lengths.

Student Help

VISUAL STRATEGY
Redraw overlapping triangles as two separate triangles, as shown on p. 356. ·······▶
$\angle V \cong \angle V$ by the Reflexive Property of Congruence.

Shorter sides

$\dfrac{VW}{VY} = \dfrac{4}{4+8} = \dfrac{4}{12} = \dfrac{1}{3}$

Longer sides

$\dfrac{XV}{ZV} = \dfrac{5}{5+10} = \dfrac{5}{15} = \dfrac{1}{3}$

The lengths of the sides that include $\angle V$ are proportional.
ANSWER ▶ By the SAS Similarity Theorem, $\triangle VYZ \sim \triangle VWX$.

Checkpoint ✓ Use the SAS Similarity Theorem

Determine whether the triangles are similar. If they are similar, write a similarity statement. Explain your reasoning.

## 7.4 Exercises

Guided Practice

Vocabulary Check
1. If two sides of a triangle are proportional to two sides of another triangle, can you conclude that the triangles are similar?
Skill Check
In Exercises 2 and 3, determine whether the triangles are similar. If they are similar, write a similarity statement.
2.

3.

**4.** Is either $\triangle LMN$ or $\triangle XYZ$ similar to $\triangle ABC$? Explain.

Practice and Applications

Extra Practice
See p. 688.

SSS Similarity Theorem Determine whether the two triangles are similar. If they are similar, write a similarity statement and find the scale factor of Triangle B to Triangle A.
5.

**Technology** In Exercises 30 and 31, use geometry software to complete the steps below.

❶ Draw $\triangle ABC$.

❷ Construct a line perpendicular to $\overline{AB}$ through C. Label the intersection D.

❸ Measure $\overline{CA}$, $\overline{CD}$, $\overline{CB}$, and $\overline{BD}$.

❹ Calculate the ratios $\dfrac{CA}{CD}$ and $\dfrac{CB}{BD}$.

❺ Drag point C until $\dfrac{CA}{CD} = \dfrac{CB}{BD}$.

30. For what measure of $\angle ACB$ are $\triangle ABC$ and $\triangle CBD$ similar?

31. What theorem supports your answer to Exercise 30?
Standardized Test Practice

32. Multiple Choice Which method can be used to show that the two triangles at the right are similar?

  (A) AA   (B) SSS

  (C) SAS   (D) Cannot be shown

**33. Multiple Choice** In the diagram, $\triangle MNP \sim \triangle RST$. Find the value of x.
