

# POLAR BEAR

by

*Genesis*

The animal that I have chosen is a polar bear. They live in caves in the snow. Female polar bears are 6 feet long. Male polar bears are 9 feet long. Polar bears sometimes eat leaves and berries, but they actually eat all kinds of seals, fish, and other small sea mammals. Male polar bears eat female polar bears. Killer whales do too. Female polar bears take care of their cubs while the male hunts for food. Babies are born without being in an egg.

Five facts:

1. Polar bears hunt alone.
2. Polar bears do not dive deeper than six feet.
3. Polar bears can stay under water for 2 minutes.
4. Polar bears sometimes drift for miles on ice floes.
5. Polar bears can camouflage in the snow.
