A Tiger Shark is a fish.

Tiger Sharks are found worldwide in warm seas.

The Tiger Shark gets 20 feet, and 6m long.

A tiger Shark eats fish, turtles, crabs, clam, mammals, sea birds, reptiles, other sharks, and just about anything else that they can catch alive.

The egg hatches in the mom's stomach and the shark develops in the mom's stomach. When the shark is born it is independent, so the mother doesn't have to watch the baby shark.

The Tiger Shark has very sharp teeth!

The Tiger Shark has a long tail!

The baby Tiger Sharks are small.

Sharks can't see that well, that's why they bite people.

Sharks swim very fast, but they can only do it for a couple of seconds.
